Admin user should not be able to log in to the Admin Portal (backEnd)

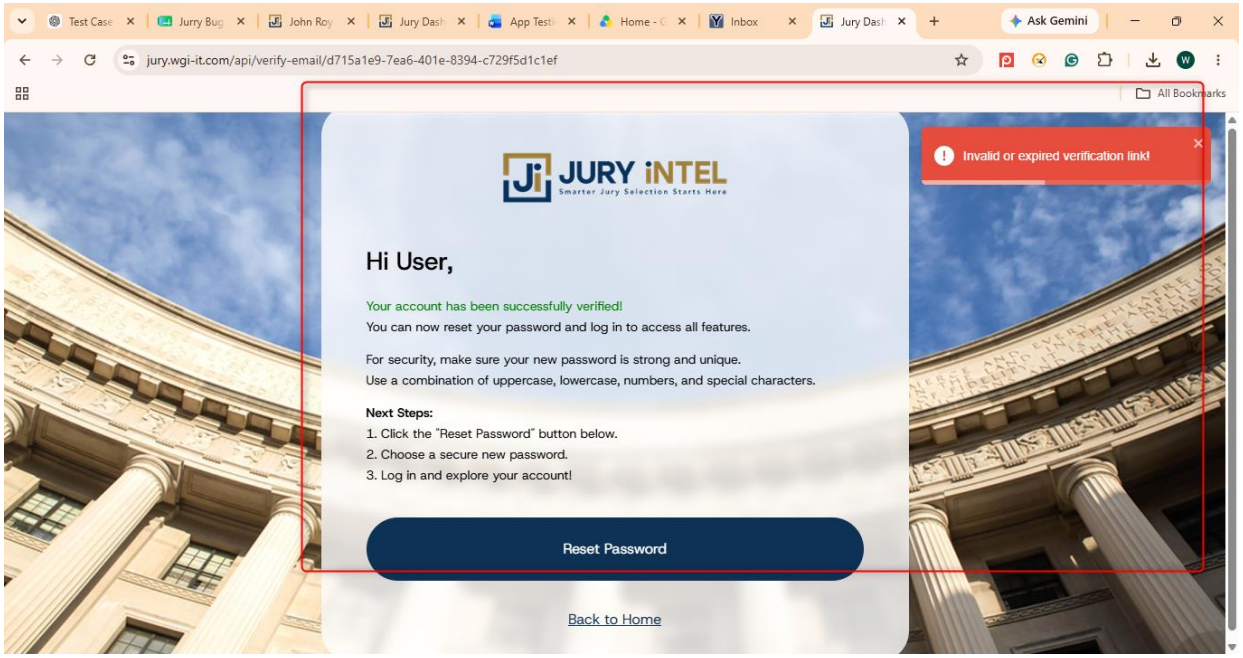

Test results - Auth use cases

- When an Admin, after logging in, is directed to the Admin Dashboard
  - Pass: Gave a proper error when a wrong password or email was used
  - Pass: Was able to log in and was directed to the Dashboard
  - Concern: If the Admin user is created as a Staff user, no data is displayed. This should not be the case. Instead, prevent the creation of an Admin user with the staff flag set to true.
  - The concern still persists, also for the user if the email is not verified but the flag is set to be true, the user is able to login, but no data is shwoing.

- Logout
  - Pass

- Change Password
  - Pass - Was able to change password from Dashboard – settings
  - Passed
  - Pass - can not change the password if the current password is typed incorrectly
  - There is no field where it's ask the user to give the old password
  - Pass: can not change if the password and confirmed password do not match
  - Passed

- On creation, the email must be verified before a user can log in
  - Pass, issue is already mentioned above.
- Lost Password Recovery
  - Fail - instead of a reset password, a "confirm password link" was sent.
  - 

  - Issue is there; it shows the email link has expired.
  -

==========

please note minor issue here.
